

How to rock the...

Lush Puppy

Thank you for buying the Lush Puppy stereo reverb and delay pedal! We trust that you will figure most of it out on your own, but below are some points to help you in your quest for the best sound.

Basic Setup

Reverb sounds best after distortion and filtering, so we recommend using the Lush Puppy as your last pedal, or in the effects loop on your amp. Either/both outputs can be used at the same time. They provide a stereo reverb effect when used together.

Power can be from a 9V battery or a regulated adapter. If you hear hum with an adapter, it's not regulated or can't provide enough juice. Make sure the polarity is centre negative. Unplug your input cable when not using the effect. Power is used whenever the input is plugged in, even in bypass.

Controls

MIX - Adjusts the amount of reverb and delay sound mixed into the dry signal.

SIZE - Affects the apparent size of each of the reverb effects.

DELAY - Adjusts the delay time for the slap-back effect from 0 to 500ms.

BIG/SMALL Switch - Chooses one of the two reverb effects.

DELAY Footswitch - Turns on or off the slap-back effect.

DO IT! Footswitch - Turns on or bypasses the effect.

ON LED - Lit when the effect is on.
